Tackling AMR Theme 2: Accelerating therapeutic and diagnostics development – Innovation grant Full Proposals

Guidance for preparing case for support
(maximum 3 pages)

In your case for support please address each of the following headings using the description under each heading as guidance. The case for support may be up to three A4 pages in length, including references, using Arial 11pt typeface with margins of 2cms on all sides. The Case for Support must not exceed 10MB.

Please focus on describing the research to be conducted rather than on the background.

1. Title of the proposal

2. Importance of the research (up to 1 page)
   • Present the idea and the reasoning behind the proposed work and explain how the research fits with the focus and strategic objectives of this call.
   • State the hypothesis to be tested or the objective to be reached.
   • Concisely explain the project’s specific aims. Why is it potentially transformative?
   • Explain the approach you will take. Why is it a risky, unconventional or creative approach?
   • What would the ultimate impact of your research be in tackling AMR? Justify how your research will add value to AMR in the short, medium, and long term.

3. Research team and environment (up to half a page)
   • Explain how the applicants and collaborators are well qualified to carry out the proposed research.
   • Describe the research environment in which this study will take place.
   • Outline any partnerships with external bodies including industry.

4. Research methodology and design (up to 1 page)
   • Detail the methodology to be used and justify this choice. Highlight if you are developing new research methods or using innovative methodology.
• Identify any facilities and resources you will need to access, giving sufficient
detail to justify any resources requested.

5. Ethics and research governance
• Describe briefly any ethical issues arising from this proposal. Please give details
of how any specific risks to human participants will be controlled, and of any
new animal research.

6. Exploitation and dissemination
• Other than publication in peer reviewed journals, indicate how any results
arising from the research will be used and disseminated.
